DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1,3,5-17,19-61 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear within the claim language what is meant by the grating or the grism dispersing away from the beam path outer portions.

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,3,5-17,19-61 are rejected under 35 U.S.C. 102(e) as being anticipated by Volger et al (US 2002/0114362).

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Figures 3A-3C illustrate a molecular fluorine laser having a gas filled chamber, a pair of electrodes (3) within the chamber, a transmission grating (32) which will provide line selection and dispersion and a reflection mirror coupled to the grating, as described in paragraph [0086].

Paragraph [0142] discloses the laser producing a narrow band output of 0.6 pm with the use of optics.

Figures 4A-4B illustrate the molecular fluorine laser with a grism 38 and 40, respectively, which will provide line selection and dispersion. The figure also illustrates a prism, which may provide beam expansion, as described in paragraph [0093].

Figure 10A illustrates the molecular fluorine laser with a grism (210) and using an aperture for producing a narrow band output beam, as described in paragraph [0133].
